The invention comprises an immunogenic composition for the treatment prevention of a Chiamydia trachomatis infection. The immunogenic composition contains a Chlamydia trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful treating or preventing chlamydial infection. The present amino acid sequence repurseents a Chlamydial infection. The present amino acid NoTB: The present sequence is not shown in the specification, but was obtained from the USPTO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SAGELTLIKNLDNSIAALPLSCFGNLLGSFTVLGRGHSLTFENIRTSTNGAALSNSAADGL

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention comprises an immunogenic composition for the treatment or prevention of a Chlamydla trachomatis infection. The immunogenic composition contains a Chlamydla trachomatis protein or its encoding nucleic acid. The immunogenic composition of the invention is useful for treating or preventing chlamydial infection. The present amino acid sequence represents a Chlamydia trachomatis protein of the invention.

NOTE: The present sequence is not shown in the specification, but was obtained from the USPPO.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated Chlamydia species high molecular weight (HMM) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE. The HWM proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, lymphogranuloma venereum (LGV), salpingitis, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and diagnosis. The present sequence represents a C. trachomatis HMM protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  120

                                                                The invention relates to an isolated Chlamydia species high molecular weight (HMM) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE. The HMW proteins and nucleic acid molecules can be used for preventing, treating or ameliocating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, pelvic inflammatory disease (PID), salpingitis, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and diagnosis. The present sequence represents a C. trachomatis HMW protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    419

The present sequence is provided in a specification relating to compounds and methods for the treatment and diagnosis of chlamydial infection. The compounds provided include polypeptides and fusion proteins comprising immunogenic portions of Chlamydia antigens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease

The present invention describes compositions comprising a Chlamydia Capi protein and methods for the diagnosis and therapy of Chlamydia infection. Chlamydia DNA and protein sequences from the present invention can have antibacterial and immunostimulant activities, and can be used in vaccines. Compounds from the present invention can be used for eliciting an immune response, specifically stimulating a Chlamydia infection in an animal. Methods from the present invention can be used for eliciting presence of Chlamydia in a patient; to stimulate and/or expand T cells specific for a Chlamydia in a patient; to stimulate and/or expand T cells infection. ABL92194 to ABB94096 and ABB94096 to ABB94174 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SPSRNTAVRPGRVARVGGGIYSYGNVAFLANGKTILFLANVASPVXIAAKQPTSGQASNT 330

The present invention relates to new nucleic acid sequences and the proteins encoded by the nucleic acid sequences. The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can can infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also thought to play a role in the pathogenesis of atherosclerosis and is also coronary heart disease. The present sequence is a protein isolated in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        150

and methods for the treatment and diagnosis of chlamydial infection. The compounds provided include polypeptides and fusion proteins comprising immunogenic portions of Chlamydia antigens and DNA sequences encoding such polypeptides. They are useful for vaccinating against chlamydial infection, which causes pelvic inflammatory disease, trachoma, acute respiratory tract infections, atherosclerosis and heart disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes compositions comprising a Chlamydia Capl protein and methods for the diagnosis and therapy of Chlamydia infection. Chlamydia DNA and protein sequences from the present invention can have antibacterial and immunostimulant activities, and can be used in vaccines. Compounds from the present invention can be used for eliciting an immune response, specifically stimulating a Chlamydia-specific T-cell response or inhibiting the development of a Chlamydia infection in an animal. Methods from the present invention can be used: for detecting the specific or a Chlamydia in a patient; to stimulate and/or expand T cells specific for a Chlamydia protein; and for treatment of a Chlamydia infection. ABL92194 to ABL92199 and ABB94096 to ABB94314 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     151 QTPTTTSTPSNGTIYSKTDLLLLNNEKPSFYSNLVSGDGGAIDAKSLTVQGISKLCVFQE 210

The encoded proteins comprise an immunogenic portion of a Chlamydia antigen. The encoded proteins are useful for the serodiagnosis and treatment of Chlamydia infection. Chlamdiae are intracellular bacterial pathogens that are responsible for a wide variety of human infections. C. trachomatis infection is one of the most common sexually transmitted diseases and can lead to pelvic inflammatory disease (PID), resulting in tubal obstruction and infertility. Trachoma due to ocular infection with C. trachomatis is the leading cause of preventable blindness worldwide. C. pneumonia is a major cause of acute respiratory tract infections in humans and is also thought to play a role in the pathogenesis of atheroselerosis and concern, heart disease. The present sequence is a protein isolated in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                          Isolated polypeptide for diagnosis and treatment of Chlamydia infection comprises immunogenic portion of Chlamydia antigen, which comprises amino acid sequence encoded by polynucleotide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    210
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 144

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAY36754-Y37949 are encoded by open reading frames (ORFS) of the genome of Chlamydia trachomatis (see AAZ01425). The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used to control growth of the microorganism. Chlamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, batholinitis; pneumopathy in breast feeding infants; and venereal lymphogramulomatosis. The polypeptides of the invention may be of use in treating these diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             FGNLLGSFTVLGRGHSLTFENIRTSTNGAALSNSAADGLFTIEGFKELSFSNCNSLLAVL 62
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Vaccine, eye disease; conventional trachoma; nonendemic trachoma; paratrachoma; inclusion conjunctivitis; genital disease; perihepatitis; nongonococcal uretritis; epidymitis; cervicitis; salpingitis; bartholinitis; pneumopathy; venereal lymphogranulomatosis.

                                                                                                                                                                                                                                                                                                      The present invention describes compounds and methods for diagnosing and treating Chlamydial infection. Chlamydia polynucleotide and protein sequences have antibiotic, antiinflammatory, antiinflammatory, antiinflammatory, antiinflammatory, antiinflammatory, and antiinflammatory, and can be used in conficulations. The chlamydia polynucleotides, proteins, compositions or methods from the present invention can be used for the compositions or methods from the present invention can be used for the compositions or treatment of Chlamydial infections, particularly in humans. The polynucleotides, proteins or compositions are particularly useful for stimulating and/or expanding T cells specific for a Chlamydia protein. Specifically, the polynucleotides, proteins or compositions are useful as vaccines for treating or preventing Chlamydial infections including conference in fortility in women), male infertility, ocular infection and conference in member of the present sequence is used in the coronary heart disease. The present invention.

determined by SDS-PAGE. The HWW proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, pelvic infertility, arteriosclerosis and atherosclerosis. The products can can also be used for detection and diagnosis. The present sequence represents a C. trachomatis HWW protein fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          VVSPSRNTAVEPDGNVARVGGGIYSYGNVAFLANGKTLFLANVASPVYIAAKQPTSGQAS 300

                                                                                                                                                                          The invention relates to an isolated Chlamydia species high molecular weight (HMW) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE. The HWW proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, pelvic inflammatory disease (PID), salpingitis, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and diagnosis. Sequences AAY16740-Y16752 represent Chlamydia HWW protein fragments

                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated Chlamydia species high molecular weight (HMW) protein having an apparent mol. wt. of 105-115 kD as determined by SDS-PAGE: The HWW proteins and nucleic acid molecules can be used for preventing, treating or ameliorating a disorder related to Chlamydia e.g. bacterial infection, conjunctivitis, urethritis, lymphogranuloma venereum (LGV), cervicitis, epididymitis, endometritis, pelvic inflammatory disease (PID), salpingitis, tubal occlusion, cervical cancer, infertility, arteriosclerosis and atherosclerosis. The products can also be used for detection and diagnosis. Sequences AAY16740-Y16752 represent Chlamydia HWW protein fragments

Sequences ABB90526-ABB90715 represent novel proteins from Chlamydia pneumoniae (strain CWL029), and ABL91184-ABR91373 represent DNA encoding them. The proteins are predicted to be immunogenic and may therefore be useful in vaccine production and for diagnostic purposes. Chlamydia pneumoniae is a common cause of respiratory disease in humans, and is also involved in the development of cardiovaccular diseases such as a therosclerosis, coronary artery disease, carcid artery stenosis, myocardial infarction, cerebrovascular disease, aortic aneurysm, claudication and stroke. The proteins and nucleic acids of the invention may be used in vaccines and pharmaceutical compositions for the proteins and nucleic acids of the invention prevention or treatment of chlamydial infections, particularly Chlamydia pneumoniae, and the nucleic acids may be used in PCR, branched DNA probe assay or blotting techniques for determining Chlamydia pene expression. The present sequence represents a specifically claimed Chlamydia purchain of the invention. C (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                          Chlamydial infection; antigen; immunogen; vaccine; diagnosis; human respiratory disease; cardiovascular disease; atherosclerosis; coronary artery disease; carotid artery stenosis; myocardial infarction; cerebrovascular disease; aortic aneurysm; claudication; stroke;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel Chlamydia pneumoniae protein useful in the manufacture of a medicament for treatment or prevention of infection due to Chlamydia, preferably Chlamydia preferably Chlamydia preumoniae, and for diagnostic purposes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is the Chlamydia pneumoniae POMP91B precursor protein. Infection by Chlamydia can result in respiratory tract diseases such as bronchitis, sinusitis and pneumonia, asthma and atherosclerosis. The gene, protein and antibodies can be used as immunogens to induce an immune reaction in humans which has the effect of vaccinating the person. They can also be used to disgnose and treat those infected with the parasite. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9

The polypeptides may be used to prevent, treat and detect the presence of Chlamydia infection and/or the presence of Chlamydia infection and/or the presence of Chlamydia infection and/or the presence of Chlamydia infection and/or the presence of Chlamydia in a sample. The polypeptides may also be used to induce an immune response in a mammal. The vaccine vector comprising the polypucleotides is used to induce an immune response in a mammal. Antibodies directed against the polypeptides may also be used the herapeutically to treat and/or prevent a Chlamydia infection. (Updated on 12-SEP-2003 to standardise OS field)

This polypeptide comprises the novel 96.7 kDa surface exposed protein omp9 of the human respiratory pathogen Chlamydia pneumoniae. Its amino acid sequence was deduced from DNA (see AAX06821) soldated from a C. pneumoniae expression library. The invention provides 12 novel surface exposed proteins, Omp4-Omp15 (see AAX06816-27). A new species specific test is sequences encoding them (see AAX06816-27). A new species specific test is claimed that is used to identify mammals (including humans) infected with C. Chlamydia pneumoniae. The test comprises detecting antibodies specific for Omp4-Omp15 or detecting nucleic acid fragments encoding these outer comp4-Omp15 or detecting nucleic acid fragments encoding these outer diagnosis of C. pneumoniae infection in mammals. The nucleic acids and proteins can also be used in the immunization of mammals, the nucleic acids being particularly useful as DNA vaccines for effecting in vivo expression of antigens. The vaccines may also prevent atherosclerosis and bronnchial asthma, which are possibly associated with C. pneumoniae.

binding site, an initiation codon and a sequence close to the 5' end of
the 98kDa putative outer membrane protein coding sequence. The 3' primer
contains the sequence encoding the C-terminal sequence of the putative
outer membrane protein and a Bardl restriction site. The stop codon was
excluded and an additional nucleotide was inserted to obtain an in-frame
C-terminal fusion with the Histidine tag. The PCR product was cloned into
a eukaryotic expression vector (pCA-Myc-His) by restricting both the
cector and the PCR product with Not1 and BamHl and performing a ligation
reaction. This expression vector was injected intramuscularly and
reaction. This expression vector was injected intramuscularly and
contrained to mice, which were subsequently inoculated with Chlamydia
pneumoniae. The chlamydial lung tiers of the immunised mice were lower
than those of the controls. Thus the 98kDa putative outer membrane
be used as a vaccine to provide protection against Chlamydia
infections, especially Chlamydia pneumoniae infections. The present
polypeptide may also be administered orally to treat Chlamydia infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a vaccine (I) for the immunisation of an animal against Chlamydia psittaci comprising at least one polymucleotide (Ia) having a C. psittaci sequence, or at least one C. psittaci antigen (Ib), and a carrier. (Ia) and (Ib) have antibacterial activity. (I) is useful for the immunisation of a bovine. The present sequence represents a C. psittaci antigen from the present invention. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
